Experience

Full-Stack Developer · **Stashh Labs** December 2023 – January 2026

Front End Developer June 2022 – December 2023

- Built creator subscription APIs for Stashh using Node.js, TypeScript, Express, and MongoDB, synchronising blockchain payments and subscription expiry to support paid plans and subscriber-only digital assets.
- Developed bulk NFT creation workflows across React interfaces and backend services, combining spreadsheet validation, chunked media uploads, and MongoDB bulk writes so creators could prepare collections in batches.
- Strengthened minting reliability under concurrent requests with atomic MongoDB capacity reservations, compensating updates on failure, and Redis rate controls to reduce overbooking risk.
- Refactored Stashh's React feeds, profiles, and collections with TanStack Query, consolidating duplicated state and supporting paginated data, optimistic updates, rollback, and targeted cache invalidation.
- Implemented wallet verification and NFT import APIs for four blockchain networks, normalising external asset data and building React wallet-linking interfaces for Tezos and Stargaze.
- Built realtime chat features across Lurky's React frontend and Node.js backend using Socket.IO and Redis, with authenticated connections, private-room authorisation, paginated history, and optimistic message updates.
- Developed contextual clip recommendation APIs using MongoDB aggregation, weighted ranking, deduplication, and pagination to surface related content by topic and speaker.
- Created interactive analytics interfaces in React and TypeScript using XYFlow and Recharts, enabling users to explore conversation topics, compare token exposure, and navigate to supporting transcripts and audio.

Front End Developer · **PlaySide Studios** April 2019 – May 2021

- Built reusable content-management workflows for Keep It Cleaner in React and Next.js, enabling admins to create and publish recipes, workouts, and masterclasses through shared editors, nested form validation, and REST API integration.
- Implemented subscription and gift-card checkout flows with Stripe Elements, including multistep forms, conditional recipient validation, promotional codes, and payment error handling.
- Consolidated duplicated admin search and pagination logic into a reusable React hook with debounced requests and URL-backed state, preserving filters and page selections across reloads and browser navigation.
- Developed a React Native goals experience using Redux and REST APIs, supporting automatic activity tracking, recurring goals, reminders, and personalised goal boards with native sharing.

Front End Developer · **EQUAL Network** July 2018 – March 2019

- Developed and integrated production workflows for a crypto wallet Chrome extension, covering account management, asset state and transaction lifecycles from initial user action through confirmation.
- Built explicit loading, failure, confirmation and recovery states around sensitive wallet operations, making asynchronous system behaviour visible and reducing ambiguity during transaction processing.

Front End Developer · **CUSI Salon** January 2017 – Present

- Built and maintained a responsive salon website using Next.js, React, TypeScript and Tailwind CSS, with reusable service components across four pages, linked service tabs and external booking access through Fresha.
- Implemented an enquiry form using React Hook Form, shared Zod validation and Next.js server actions with Resend, supporting email submission, field-level errors and input preservation after validation failures.

Skills

Programming Languages

TypeScript, JavaScript, HTML, CSS

Frontend

React, Next.js, Tanstack Start, React Native, Tailwind CSS, Motion, React Spring, React Three Fibre

Backend & Databases

Node.js, Express, Convex, PostgreSQL, MongoDB, Redis

Tools & Platforms

Git, GitHub, Vercel, Firebase, Docker, Claude, Codex

Projects

AI Chat App

Built with React, TypeScript, and Convex, featuring streaming responses, persistent drafts, conversation history, and guest access.

Club and Court Booking Platform

Sports club management platform featuring court bookings, online payments, recurring event scheduling, membership access controls, and tools for managing courts and opening hours.

Education

The University of Melbourne

Bachelor of Commerce (Management & Marketing) 2016

Interests

Tinkering with new tech, lifting heavy things, pizza making, pickleball, running
